Facilitator checklist

Before the visit

- [ ] Install the app on your own phone from the poster QR and sign in once.
- [ ] Print 2 posters and one observation sheet per farmer (12 to 20 farmers).
- [ ] Carry a leaf with a visible disease, one Soil Health Card (ask farmers to bring theirs), a power bank and a mobile hotspot.
- [ ] Pick 2 villages; aim for at least half the farmers not reading comfortably.

During each session (15 to 20 min)

- [ ] Help them install from the poster, on their own phone if possible.
- [ ] Read tasks 1 to 8 aloud. Time each one. Write exactly where they stop.
- [ ] After each answer, point to the thumbs up / down in the app and let them choose.
- [ ] Ask the four closing questions on the sheet.

After the visit

- [ ] Ask each farmer to keep using the app for 14 days. With their permission, note their Gmail address for the Play Store closed test (Google requires 12+ testers for 14 days).
- [ ] Check usage in Firebase: Firestore → `feedback` (helpful yes/no per feature) and Analytics → Events (`home_tile`, `crop_diagnosis`, `soil_advice`, `mandi_price`, `ask_expert`, `listing_created`, `voice_input`, `listen`).
- [ ] Enter sheet results in one spreadsheet: one row per farmer per task.

Targets to pass

Check a sick leaf, answer heard	**80% unaided, < 60 s**
Today's mandi price	**80% unaided, < 30 s**
List produce by voice	**70% unaided**
Ask a question by voice	**80% unaided**
Change language	**90%**
Come back in week 2	**40% of farmers**
